

# ELECOMPACK

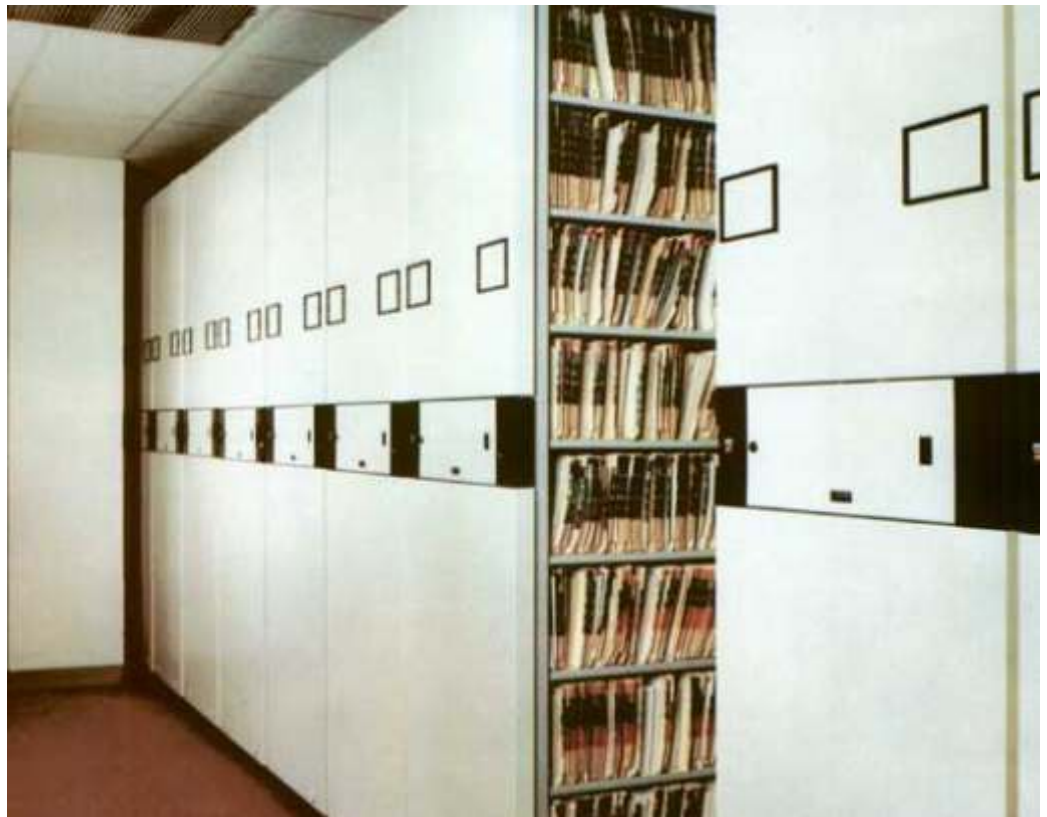

## CASE STUDY

Adventist Hinsdale Hospital  
Hinsdale Illinois

Adventist Hinsdale Hospital, a member of Adventist Midwest health, is an acute care, 459 bed hospital, located in a suburb of Chicago, Illinois. Some time ago, Hinsdale's Medical Records Department began preparing to move into a new wing of the facility. As the architects, hospital plant operations staff, and medical record managers began to investigate movable filing Systems, it soon became clear that Elecompack would become the system of choice.

Hinsdale had utilized another brand of electronic mobile shelving for approximately 10 years. "Elecompack's structural design of welded uprights that recess five inches into the carriage for safety soon convinced all of us that is was the best on the market", says Darice Grzybowski, Director, Medical Record Services.

'Advanced System Group, Inc., the vendor with whom we worked closely during the design and installation of the system, recognized space was at a

premium in our new area. Other considerations included functionality, future growth, an aesthetically pleasing design, and pricing. In addition," Ms. Grzybowski stated, "Advanced's 'extra touches' included coordination with architectural and construction personnel, custom color match with the A.S.R.S. factory and 'on-call' service support during the week of our move."

"It wasn't until after the move that we realized some of the other benefits we received by purchasing an Elecompack system (i.e.: shelving specifically designed to prevent folder overhang, and a sliding movable shelf divider that eliminates constant removing and resetting every time a folder is removed). Many additional standard features such as programmable aisle, aisle lighting, pull-out shelves and bi-directional movement of ranges were welcomed by our staff."

"I would certainly recommend Elecompack for any major filing application," states Ms. Grzybowski.
